Hazard Analysis Form

This form can be used by Fermilab Employees, Fermilab Supervisors, Fermilab Task Managers, Construction Coordinators, Service Coordinators and Fermilab Subcontractors. This is a dynamic document which may require modification as the project moves from start to finish and should be readily available at the site where the work is being performed.

Note: Not all sections of the first page are applicable to every job or task, complete what is necessary for your specific job or task.

to be improved.

Utilizing the format below, identify hazards and environmental aspects, and their corresponding safety precautions/procedures to mitigate hazards. Use as many sheets as necessary.

HAZARD ANALYSIS

Step	Description	Hazards/ Environmental Aspects	Precautions / Safety Procedures
1	Opening tape storage cabinet drawers to sort thru tapes for disposal.	Potential of tape storage cabinets tipping over if more than one cabinet drawer is opened at a time causing injuries.	Open only one blue storage cabinet drawer at a time. Completely close drawer after removal of authorized tapes for disposal.
2	Caution of open floor tiles on raised floor when sorting thru tapes or transporting tapes on a cart to collection dumpster.	Potential fall injury.	Place safety warning posting using safety cones or safety tape/streamers to mark areas of open or missing floor tiles. When feasible, close up missing raised floor tile openings with solid floor tiles.
3	Transporting tapes on cart to outside collection dumpster.	Potential for cart containing tapes becoming unstable during moving causing injuries or property damage.	Use caution and ensure load is stable before moving. Do not overload the cart and make frequent trips.
